

KLK2

Kallikrein-2

UniProt P20151

Secreted serine protease; a 2025 study (PMC12580770) demonstrates surface accessibility on prostate cancer cells via live-cell FACS, confocal IF, and three distinct therapeutic modalities.

SRC

Proto-oncogene tyrosine kinase Src

UniProt P12931

N-terminal myristoyl anchor tethers SRC to the inner leaflet; DBs read this as cytoplasmic. Deep-dive flagged context-dependent lysosomal-exocytosis surface display.

CD63

Tetraspanin-30 (LAMP-3)

UniProt P08962

4-TM tetraspanin, lysosomal in steady state but heavily exocytosed to the cell surface during membrane trafficking. DBs flagged classical surface; deep-dive added the context.
