

a**b****c****d**

Dots = real values from the 1197 published deep dives (287 surface_accessibility='no'; 910 surface-yes-even-weak). Panels a/b split by verdict bucket; panels c/d restricted to surface-yes since non-surface proteins carry little extracellular evidence by definition. Violin shape + IQR box = synthesised 5,000-draw fan (Gaussian around the per-bucket empirical mean $\pm$ std, or 15%% mean, whichever larger) extrapolating to a full cohort. PRELIMINARY — ~1,197 of ~5,128 swept, pre-QA-fix.
